iPhone 5: Apple Mobile Phones

The [iPhone 5](#) launched didn't happen when expected. Conversely, the lately introduced 4S model has a lot of different new features plus some smart new capabilities. This has pushed many into speculating that Apple's 5th generation smartphone can have benefits that this world hasn't seen just before. Provided that many people have pretty much become used to wonderful innovations being brought about by the company, it's worth exploring the theorized features, even though they may appear a little bit outlandish for the present time.

A 3D camera may become a reality with iPhone 5. Speculations declare that brand-new hardware will probably be incorporated into the already existing camera. Because of this, the unit should be able to seize, process and create 3D images. It is definitely tricky to assume that we will be able to take 3D pictures soon, nevertheless we have to accept that nothing is impossible.

The main question for you is whether there exists any ground for these rumors. A major Apple rumor web site has reported the fact that company had requested for patent of a 3D picture taking technologies. Evidently, the application was filed at the beginning of 2011. With any luck, we'll really be capable of taking 3D photos and perhaps make 3D video clips in the very near future.

Users should be able to charge the iPhone 5 easily. At present, you have no choice, nevertheless to employ a cable charger to charge existing smartphones. The truth is, in order to be able to sync your iPhone wirelessly compared to other gadgets currently, you'll want it connected to the electric system in your residence or office.

It would be impressive so as to charge mobile phone along with other devices wirelessly. Nevertheless, no one can explain how this can occur, even the tech experts that actually produce the speculations. A report recently published in the reputed Wall Street Journal newspaper stated that Apple is now testing the new way of charging, nevertheless there aren't any substantive grounds to consider that the authors of your report speak about wireless charging.

[iPhone 5 features](#) will be fire-proof. It is regarded that Apple has patented a halogen-free resin material. The composition includes specific polymers and fillers plus an additive that holds back flames. It truly is thought that the material actually has self fire-extinguishing properties. Fundamentally, should the device manufactured coming from it catches fire, the case will stop the flames just before they damage the hardware.

With any luck , iPhone 5 may have these characteristics and abilities.
