# Reviews of Pocket Size Cameras

As you shop for a pocket size camera, you will need to sift through the bad to get to the good. No company is perfect and even the best camera makers won't always get it right. But improvements are being made. Compromises and sacrifices are sometimes necessary because of the many factors that each maker has to consider. There are many reviews and other reading available if you are interested in getting a digital pocket size camera. Before buying anything, read the following reviews on some selections that may be of interest. Using smart Seo strategies can certainly help people to positively rank for anything, wide key words like gadgets or more specific items like [grand view dollhouse](#). Lets start with the Sony Cyber-shot DSC-TX9, which appears to have made some compromises in certain areas. While some people like soft pictures, we found the images from this camera to be consistently too soft. Some might find this camera's quick shooting capabilities appealing. For the adventurous, this camera performs well under a variety of conditions. The specs on this ultra compact camera are - 12 megapixel capability, 4X zoom, and 3.5 inch color TFT matrix LCD display. We wish the battery life was better along with the photo softness issue. If you are interested in learning more about this camera, you will need to do more research as there are too many features to cover adequately in this article. Smart Seo practices, employed intelligently are able to end in high serps for any topic from baseball to [play around dollhouse](#).

For someone who just wants a point and shoot camera without overly powerful zoom, the Panasonic Lumix DMC-FH20 is a great option. This ultra compact 14.1 megapixel camera comes with a built in flash and LCD. The LCD utilizes a matrix TFT technology. You will use the 2.7 LCD display to review and frame your shots because this camera does not have an optical viewfinder. This camera is also equipped with an optical image stabilization system to help compensate for shaking.

With lots of manual features, the Canon PowerShot S95 is good for those that like to work with their hands. The photos this little gem produces are gems themselves. This camera is ultra compact and comes with a multimedia card, SD memory card, and a 3 inch LCD, as well as having a more reasonable 10 megapixel resolution. This camera uses the pop up variety of flash. This camera makes use of many great features of the S90 model. They did make improvements to the video resolution, increasing it to 720p. They also now allow you to capture up to three photos at different levels of exposure. The camera process these exposures to produce a single image with much more detail.

There are many reasons its so challenging to choose the best pocket size digital camera. The preferred route would be to find a camera that meets all your needs from a camera and falls within your budgetary constraints. Don't make high pixel numbers a priority unless you're planning to make large prints of the photos you take. Don't listen to slick marketing ads that are designed to entice you to focus on that one thing to the exclusion of other features that may be more important to you.
